Experience

halan (First private unicorn in Egypt) Jun. 2024 – Present

Software Engineer

Go, Scala, MongoDB, Kafka, Kubernetes, Redis, Elasticsearch

- Implemented a new feature enabling users to pay via **Instapay**, integrating with the **Collect Plus API**.
- Developed core features in **Halan Wallet**, an e-wallet supporting P2P transfers, P2M payments, and Halan service installments.
- Migrated user and transaction data from the legacy **Raseedy Wallet** to the new wallet system.
- Implemented cash-out, registration, and unregistration flows integrated with **Meeza (MDP)**.
- Resolved critical bugs in production in collaboration with the QA team.
- Built the backend for **Halan Investment Profile**, offering users real-time insights into their savings and equity funds.
- Collaborated with mobile teams to support dynamic components rendered in the iOS and Android apps.
- Engineered the **Microfinance Profile** module, guiding users through installment payments for their loans, which led to a **40% increase** in users viewing their installment plans and an **88% increase** in in-app installment payments.
- Contributed to a major **migration of the loan and installment payment service** from Scala to Go, transitioning to an event-driven model using **Kafka** to communicate with the core banking system to avoid network issues.

bld.ai Nov. 2022 - Nov. 2023

Software Engineer

Python, Django, Git, GitLab, Open-AI, React.js, Docker

- Worked on an internal landing page project at bld.ai, utilizing ChatGPT API to generate dynamic content from Google Sheets data.
- Collaborated across teams to align project objectives, enhancing user engagement.

bld.ai Jul. 2022 - Oct. 2022

Software Engineering Intern

Python, JavaScript, HTML, CSS, Bootstrap, Django, React.js

- Completed a full-stack internship at bld.ai, gaining proficiency in frontend development with React.js and backend development using Django and REST APIs.

Orange Innovation Nov. 2021 - May. 2022

Software Engineering Intern

Java, SQL, Spring, Spring Boot, Threads

- Contributed to the development of a production project involving a chatbot deployed on Smartly.ai, built using Spring Boot for the backend. The chatbot engaged users by suggesting healthy food recipes and provided YouTube videos for the chosen recipe YummyBot.
- Learned Java sockets, JDBC, and threads.

Education

October 6 University (O6U) Sep. 2019 - Jul. 2023

B.S. in Computer Science

Achieved an Excellent Degree for my graduation project.

Projects

E-learning Management System (ELMS) Feb. 2023 - Ongoing

E-learning Website Meeting, Assignments & Quizzes

Python, JavaScript, Django, DRF & channels, React.js

- Developed a student-to-student connectivity feature using Django Channels.
- Integrated Google Calendar API to automate event scheduling and notifications for platform users.
- Implemented features for assignment submission and quizzes within the platform.

Biometric Attendance Oct. 2023 - Ongoing

Desktop Application project to create reports and Calculate salaries.

Python, Tkinter, OpenPyXL

- Desktop application with a user interface to collect employee data and attendance events from the ZK-14 Biometric Machine.
- Generate attendance and payroll reports for employees in a company.

Honors, Awards and Competitions

- Participated at Arab African Collegiate Programming Contest (2022)
- Participated at Egyptian Collegiate Programming Contest (2021, 2022, 2023)
- Solved +2000 problems on various online judges

Leadership and Volunteering

ICPC O6U Community

Sep. 2020 - present

Co-founder & Mentor

- Guiding a community of CS students in their problem solving and Competitive Programming skills.
- Orchestrating coding sessions, and coding competition events to enhance skills and encourage continuous learning.

Skills

Languages:

Python, Java, C/C++, SQL, HTML, JavaScript

Technologies & Tools:

Django, React.js, Git, Linux, Docker, CI/CD (familiar with), Spring & Spring Boot

concepts:

Object Oriented Programming, Problem Solving, Algorithms, Data Structures, Testing.
